

The Ficus Audrey is the national tree of India. In its natural habitat its canopy can cover a lot of ground and provide great shade in warm climates. Grown as a houseplant for its matte green leaves and thick tree like stems. It's easy going nature and low maintenance care make it the perfect plant for any houseplant collection.

Ficus benghalensis

FICUS AUDREY

Light

High levels of bright indirect or direct light.

Bright indirect/High

Watering

Allow the top 2-3" of the potting soil to dry out between waterings from Spring to Fall and keep barely moist in Winter. Maintain low to moderate humidity for the plant. Too much water will cause the lower leaves to yellow and fall off.

Feeding

Feed every 2 week during the growing season with a balanced houseplant fertilizer, such as Espoma Organic Indoor Houseplant Food.

Planting & Care

Grow with Black Gold® All Purpose soil or well draining soil with perlite in a pot that fits the root ball. Set in bright indirect or medium light, away from drafts. Prune to keep the plant size in check. Repot every 2-3 years when root-bound.

Size

In its natural habitat, this plant can grow to monstrous proportions up to 100 feet tall. In the house, it may reach 10 feet tall if given room and large enough pot. Average size is 4-6' tall and wide.

Flower

This plant will not likely flower in the house.

Temperature

60-75°F

Humidity

Low to moderate
