

This versatile plant has a dainty demeanor that works well in pots or hanging baskets, as well as topiary or employed as a groundcover in containers occupied by large, upright houseplants.

Hedera helix

IVY 'ENGLISH'

STEINBRINK

2010 30TH AVENUE
KEARNEY, NE 68845
308.234.6670

Light

The plain green varieties can tolerate low-light levels but prefer a medium to bright light if the plant has variegation.

Bright indirect/Medium light

Watering

Evenly moist soil is best for ivy, never allow the plant to sit in water. Let the soil dry slightly (top 1/2 inch) before watering again.

When you do water your ivy, take it to the sink and rinse the leaves off also, this helps to deter spider mites.

Feeding

Apply a balanced liquid fertilizer (Espoma® Organic Indoor Liquid Organic Plant Food) every 2 weeks from Spring to Fall.

Planting & Care

Plant your ivy in a well drained potting medium. We recommend Black Gold All Purpose Potting Mix amended with perlite or horticultural charcoal for added drainage.

Flower

This plant is grown for foliage.

Size

These vines can trail 1-2 feet long but can be kept under control by trimming.

Temperature

65-85°F

Humidity

High
