

Crassula ovata

JADE

2010 30TH AVENUE
KEARNEY, NE 68845
308.234.6670

Light

Bright indirect/ Medium

Watering

This plant has been touted as extremely drought tolerant, and whereas it can take long periods between waterings, this depends on the level of light it is growing in. If it dries down too much, it will drop leaflets. Allow the top of the potting soil to dry out between waterings from Spring to Fall; water once a month in Winter.

Feeding

Feed every other month during the growing season with a balanced houseplant fertilizer, such as Espoma Organic Indoor Houseplant Food.

Planting & Care

Size

This plant can reach up to 3 feet tall and 2 feet wide

Flower

Temperature

60-75°F

Humidity

Low
